

POP Compliance Declaration

Persistent organic pollutants (POPs) are organic substances that persist in the environment, they accumulate in living organisms and pose a risk to our health and environment. They can be transported by water, air or migratory species across international borders, reaching regions they have never been produced or used.

The Stockholm Convention Persistent Organic Pollutants Review Committee (POPRC) reviews and updates the Stockholm Convention’s list of persistent organic pollutants (POPs) which details the substances that are eliminated, restricted or subject to limitations. International Wire Group also monitors this list in conjunction with the requirements of Regulation (EU) 2019/1021 on persistent organic pollutants and The Persistent Organic Pollutants Regulations 2007.

Based on the information given to us by our suppliers, International Wire Group declares that the materials and processes used or produced during the manufacture of its products per POPs Regulation, Effective September 25, 2025:

[Substances subject to POPs Regulation - ECHA CHEM](#)

- Do not intentionally contain POPs;
- Do not involve laboratory-scale research using POPs;
- Do not use equipment containing POPs;
- Do not exceed the limits defined for unintentional trace contaminants of POPs.
